

Issues with Lead Free Alloys with Silicon? No Sweat!

Many valve manufacturers have introduced lead free valves using a silicon based alloy. Manufacturers that use this alloy are having issues with valve performance in the field, especially when contractors are soldering.

SWITCH!

Jomar Valve uses a binary alloy that performs exactly like standard brass. It contains no foreign additives like silicon. All Jomar Italian and JoFlo branded products contain zero silicon. Contact your Regional Sales Manager or Jomar Customer Service Representative about Jomar lead free products.
